

Aged Self Portrait

Using Photoshop, you are going to create a piece of art that allows the viewer to see you age right before their eyes. To start with, you need to use the app "Aging Booth" to take a picture of yourself. You can have someone take the picture of you, or do it yourself. Email both your before and after photo to your Viator gmail account then upload both photos to your Google Drive.

To start, open your "before" photo in Photoshop. Set the cropping tool to width: 4", height: 7" and ppi to 125. Crop the photo so your face fills the image area.

Apply all your skills as a Photo Correction artist to improve the image. Play with levels, color balance, saturations and all other features to make this image is the best it can be. You can also use the clone stamp tool, spot healing brush, etc. to clean up any blemishes or imperfections

When you have completed your work on the before image, download and open your aged photo in Photoshop. Create a new page that is 4" x 7" at 125 ppi and paste the aged image into this new page. Image>Transform>Scale this image so it is EXACTLY like you before image. You must be sure you line up the major facial features (eyes, nose, mouth) to fall on the page just as they do in the before image.

Turn on the Rulers, and drag a vertical guide at the 1", 2" and 3" interval on both images.

Be sure the "Snap To" feature is on (under the "View" menu head.)

Create another new page that is 8" x 7" at 125 ppi.

Using the rectangular marquee tool, create a selection the covers the first section of the before photo (it will be 1" across by 7" long.)

Copy this section and then paste it into the far left edge of the new blank page.

Repeat this for the aged photo, but paste it next to the similar section of the before image.

Repeat the process for the second, third and fourth section of both portraits and save this page.

Print the image on the good quality paper.

Assemble as directed by instructor.
