

GarageBand 3

ACT GarageBand Project
Due Oct. 18, 2007

- Using GarageBand, compose an original song
- You may choose any genre of music
- It should be about 90 seconds long
- Include many different instruments & beats
- Include your own voice as an instrument (choose “real instrument” when you add your track, then go to “vocals”)
- You can alter and enhance your voice (helium breath, diva, reverb, etc.)
- Also create a mini song, about 15 seconds, to include into your PowerPoint project
- The mini song must be introduced by you, using the record feature (in vocals)

Have a great time creating your original song!
This is the best way to avoid breaking copyright laws when you use background music in a presentation, because YOU are the owner of this music you just created.
