# Installing the Classical Greek Keyboard from Keyman

*These instructions were written using version 14 of Keyman on a Windows PC in June, 2021. The Keyman app allows you to type in Greek.*

☐ 1. Download the Keyman application by choosing the green *Download* button from the correct web page below. It looks like this:

   a. Windows: https://keyman.com/windows/
   b. Mac: https://keyman.com/mac/
   c. Linux: https://keyman.com/linux/

☐ 2. **Install the application** (the exact process is specific to your device)

☐ 3. **Install the keyboard** (*Greek Classical*)

   a. Open *Keyman Configuration* if it does not open automatically after installation

   b. Click the orange *Download keyboard…* button at the bottom of the window. It looks like this:

   c. In the search box type *Greek Classical* (note word order)
   d. Click on the *Greek Classical* heading to download and install the keyboard

☐ 4. **Configure Keyman** to function as you wish
   a. In *Keyman Configuration*, select **Hotkeys** from the menu on the left
      i. Find "Ancient Greek" under *Keyboard Layouts*
      ii. Click the "(none)" hyperlink on the right
      iii. Type the hotkey combination that will switch from your default English keyboard to the Classical Greek keyboard; Keyman will memorize the key combination that you type (I use ALT+Z, but you can use any combination that works for you)
   b. In *Keyman Configuration*, select **Options** from the menu on the left
      i. Make sure the first *General* option ("Keyboard hotkeys toggle keyboard activation") is checked
      ii. Under *Startup*, choose whether you want Keyman to start automatically whenever you turn on your computer, or if you want to always turn it on manually

☐ 5. **Test Keyman**
   a. Open any word processing program
   b. Toggle keyman on by hitting your hotkey combination
   c. Type several keys to ensure you're typing in Greek. *Note that accents will only work over vowels and breathing marks will only work over vowels and ρ (rho).*
   d. Toggle keyman off by hitting your hotkey combination again
