

# Science - Ch. 1 Study Sheet

cell - a tiny building block that makes up every part of an organism

inherited - passed on from parents

life cycle - the changes that happen to an organism during its life

metamorphosis - series of changes in appearance

organism - any living thing

pupa - an organism, wrapped in a cocoon, that doesn't move or eat

living things are different from nonliving things for several reasons:

- Living things reproduce
- Living things react to changes around them
- Living things use energy

there are two types of cells - plant cell, animal cell

cells are so small you need a microscope to see them

root cells keep a plant in the ground
