

Scientific Greeting Card

You were just hired as freelance writer for Hallmark Greeting Cards. Your first assignment is to design a greeting card with a scientific twist to it. The topic of the card is up to you, the designer: Happy Birthday, Valentine's Day, Mother's Day, Graduation, Get Well, etc. The greeting may be in a poem form (Roses are red . . .), song lyrics, a joke or an original piece of writing that must have material from our circulatory system unit intertwined.

- The heart diagram on front needs to be colored with a title or the beginning of the greeting (Be Mine . . .).
- On the *inner right side* of the card, write the greeting neatly in marker, Sharpie or type it. You are a professional; do not use pencil or pen.
- Include at least **THREE** circulatory system facts/ information
- Follow the rules of English (spelling, punctuation, capitalization, grammar, etc.)
- Write the full Ray M.S. heading on the **back** of the card.
- Up to 5 bonus points may be earned for the Circulatory System TEST.

Card due: _____
