

HELP!

Below you will find cards showing the different steps of digestion. Somehow, these have printed out of order. I need your help to organize the cards in the correct order. **Cut** out the cards and **arrange** them in the correct order. Number the **BACK** 1-10 so we don't have this same mistake again.

Hydrochloric acid and pepsin digest proteins in the stomach. The stomach squeezes to mix food.

Food, in the form of chyme, moves to the small intestine

Solid waste material is forced out of the body.

Water is absorbed from the food waste back into the body.

Waste products leave the small intestine and enter the large intestine.

The tongue pushes food to the back of the mouth where it is swallowed.

Bile and pancreatic juice enter the small intestine to break down fats

Peristalsis pushes food through the esophagus on the way to the stomach.

Food is chopped and ground in the mouth

Nutrients are absorbed into the blood by villi in the small intestine.
